And that donated blood, or blood products, are safe before they are used in blood transfusions and other medical procedures. Blood banking includes typing the blood for transfusion and testing for infectious diseases. Facts about blood banking

Paperback

Blood Banking | Johns Hopkins Medicine

Forward typing and reverse typing: The two most common tests used in the blood bank are the forward typing and reverse typing tests. Forward typing uses commercial antisera (anti-A and anti-B) and patient red blood cells. A suspension of 2-5% patient RBCs are made and antisera is added to individual tubes.
