For close to 20 years, [Industrial Engineering and Production Management] has been a successful text for students of Mechanical, Production and Industrial Engineering while also being equally helpful for students of other courses including Management. Divided in 5 parts and 52 chapters, the text combines theory with examples to provide in-depth coverage of the subject.

This volume contains a selection of papers presented at the 7th Nirma University International Conference on Engineering 'NUICONE 2019'. This conference followed the successful organization of four national conferences and six international conferences in previous years. The main theme of the conference was "Technologies for Sustainable Development", which is in line with the "SUSTAINABLE DEVELOPMENT GOAL" established by the United Nations. The conference was organized with many inter-disciplinary technical themes encompassing a broad range of disciplines and enabling researchers, academicians and practitioners to choose between ideas and themes. Besides, NUICONE-2019 has also presented an exciting new set of events to engage practicing engineers, technologists and technopreneurs from industry through special knowledge sharing sessions involving applied technical papers based on case-study applications, white-papers, panel discussions, innovations and technology products. This proceedings will definitely provide a platform to proliferate new findings among researchers. Advances in Transportation Engineering Emerging Trends in Water Resources and Environmental Engineering Construction Technology and Management Concrete and Structural Engineering Futuristic Power System Control of Power Electronics Converters, Drives and E-mobility Advanced Electrical Machines and Smart Apparatus Chemical Process Development and Design Technologies and Green Environment Sustainable Manufacturing Processes Design and Analysis of Machine and Mechanism Energy Conservation and Management Advances in Networking Technologies Machine Intelligence / Computational Intelligence Autonomic Computing Control and Automation Electronic Communications Electronics Circuits and System Design Signal Processing

Robotics for Engineers provides introductory but detailed study of robot design, installation and maintenance. It caters to the needs of the students by emphasizing the practical utility of robot in the field of engineering, science and technology. The book introduces the science and engineering of robotics and provides in-depth coverage of mechanical and electrical manipulation. For every topic, the fundamental mathematical concepts and analytical tools required to develop the relevant theory, algorithms and programming have been discussed sufficiently. ACL programming has been used for developing the robot programming. In the current form, this book is useful for undergraduates, postgraduates and research scholar students for their course and research projects.

Foreword by Gul Panag A Political SpooF The mysterious Badi Sarkar wants her son to become the Prime Minister of India. Her reticent son Chhote Sarkar wants to eat ice-cream. Great Leader wants his Orchid party to win the elections. He also wants a wand that works. The horny Baba Neemacharya wants to do the neem-yoga with Girl 45. Impulsive billionaire industrialist Giani Seth wants to beat Chaddha in Candy Crush. Honest Ambika Madam wants to retire in peace. Volatile BB wants to send all corrupt politicians to jail. Babli wants to lose weight. But what is the PM doing in a cave in the Himalayas?! Democracy is a satirical look at the madness and brouhaha in present-day India, where nothing is what it seems to be, power is all-important, and everything people do is to win the race to power. PS: No politicians were hurt in the writing of this book. Atulya Mahajan is a writer and satirist. His debut novel Amreekandesi - Masters of America was published in 2013. He writes a popular satire blog at amreekandesi.com and tweets as @amreekandesi. He has previously written humour columns and currently blogs for The Times of India.

The book has been designed for undergraduate students studying Mechanical Engineering or Industrial Engineering. It discusses various concepts and provides practical knowledge related to the area of Industrial Engineering and Management. The book lucidly covers Project Management, Quality Management, Costing etc. in detail to develop the required skills among the students.

This book consists of selected peer-reviewed papers presented at the NAFEMS India Regional Conference (NIRC 2018). It covers current topics related to advances in computer aided design and manufacturing. The book focuses on the latest developments in engineering modelling and simulation, and its application to various complex engineering systems. Finite element method/finite element analysis, computational fluid dynamics, and additive manufacturing are some of the key topics covered in this book. The book aims to provide a better understanding of contemporary product design and analyses, and hence will be useful for researchers, academicians, and professionals.

Increasing disruption, diminishing returns, and demanding Customers require business leaders to create more Value, remain relevant, and stay ahead of competition. CEOs have to evolve a "Value Creation" culture for the company so as to properly balance the interests of Customers, Employees, Investors, and the Marketplace. This pathbreaking book shifts the focus to Creating Value for the entire business ecosystem and not just for the shareholders. It will launch organizations into the world of Value Creation and will convert good CEOs and companies to great ones with longevity and higher profitability.

In this book, Sanjoy Mahajan shows us that the way to master complexity is through insight rather than precision. Precision can overwhelm us with information, whereas insight connects seemingly disparate pieces of information into a simple picture. Unlike computers, humans depend on insight. Based on the author's fifteen years of teaching at MIT, Cambridge University, and Olin College, The Art of Insight in Science and Engineering shows us how to build insight and find understanding, giving readers tools to help them solve any problem in science and engineering.To master complexity, we can organize it or discard it. The Art of Insight in Science and Engineering first teaches the tools for organizing complexity, then distinguishes the two paths for discarding complexity: with and without loss of information. Questions and problems throughout the text help readers master and apply these groups of tools. Armed with this three-part toolchest, and without complicated mathematics, readers can estimate the flight range of birds and planes and the strength of chemical bonds, understand the physics of pianos and xylophones, and explain why skies are blue and sunsets are red.The Art of Insight in Science and Engineering will appear in print and online under a Creative Commons Noncommercial Share Alike license.
