NCLEX Takeover: Achieve Mastery in Lab Values & Fluids ...

NCLEX Review: Fluid and Electrolytes. Sodium (135-145 mEq/L) The major cation in the ECF. It has a water retaining effect. When there is excess Na⁺ in the ECF, more water will be reabsorbed by the kidneys. Functions: maintains body fluids, conduction of neuromuscular impulses via pump, regulates acid-base balance by combining with Cl⁻ or HCO₃⁻.

NCLEX Review: Fluid and Electrolytes

Fluid and Electrolytes. NCLEX. Review. Electrolytes are charged chemicals or ions that live in the blood to provide the body a variety of important functions. The main function of electrolytes are to serve as messengers delivering signals from cells to cells, nerves to nerves, and even organs to organs.

Homeostasis: Fluids and Electrolytes NCLEX Practice Quiz ...

Fluid that shifts into the interstitial spaces and remains there is referred to as third-space fluid. Common sites for third spacing include the abdomen, pleural cavity, peritoneal cavity, and pericardial sac. Third-space fluid is physiologically useless because it does not circulate to provide nutrients for the cells.

Fluid and electrolyte balance plays an important role in homeostasis, and critical care nurses assume a vital role in identifying and treating the physiologic stressors experienced by critically ill patients that disrupt homeostasis. This nursing exam covers the concepts of fluids and electrolytes. Test your knowledge with this 30-item exam and feel confident to soar high in your NCLEX with this questionnaire.

Homeostasis: Fluids and Electrolytes NCLEX Practice Quiz ...

Answer: a. Electrolytes Rationale: The nurse knows that the client's electrolytes need to be restored. Rehydration after exercise can only be achieved if the electrolytes lost in sweat, as well as the lost water, are replaced. The client does not need to have non-electrolytes, colloid solution, or interstitial fluid restored.
