Similarly, you can now search through photos for recognised objects - be that flower species, dog breeds, or landmarks ... our brains process hundreds of cues. On a video call, those signals ...

Faculty often worry that students can't or won't read critically, a foundational skill for success in academic and professional endeavors. "Critical reading" refers both to reading for academic purposes and reading for social engagement. This volume is based on collaborative, multidisciplinary research into how students read in first-year courses in subjects ranging from scientific literacy through composition. The authors discovered the good (students can read), the bad (students are not reading for social engagement), and the ugly (class assignments may be setting students up for failure) and they offer strategies that can better engage students and provide more meaningful reading experiences.

This book covers the latest research on landmarks in GIS, including practical applications. It addresses perceptual and cognitive aspects of natural and artificial cognitive systems, computational aspects with respect to identifying or selecting landmarks for various purposes, and communication aspects of human-computer interaction for spatial information provision. Concise and organized, the book equips readers to handle complex conceptual aspects of trying to define and formally model these situations. The book provides a thorough review of the cognitive, conceptual, computational and communication aspects of GIS landmarks. This review is unique for comparing concepts across a spectrum of sub-disciplines in the field. Portions of the ideas discussed led to the world's first commercial navigation service using landmarks selected with cognitive principles. Landmarks: GI Science for Intelligent Services targets practitioners and researchers working in geographic information science, computer science, information science, cognitive science, geography and psychology. Advanced-level students in computer science, geography and psychology will also find this book valuable as a secondary textbook or reference.

At the beginning of a new writing project—whether it's the first page of a new novel or a less ambitious project, writers often experience exhilaration, fear, or dread. For Kristjana Gunnars, the call of a new project is "like someone you don't know knocking on your door—you either choose to let the person in or not. It's both exciting and dangerous to start a new manuscript." This book is an engagement with that "stranger" called writing. Creative or imaginative writing is a complex process that involves more than intellect alone. Writers make use of everything: their sensibilities, history, culture, knowledge, experience, education, and even their biology. These essays seek out, and gather into a discussion, what writers have said about their own experiences in writing. Although the writers are from around the world and of very different backgrounds, the commonality of their remarks brings home the realization that writers everywhere are grappling with similar problems—with the seemingly simple problems of when, where, why, and what to write, but also larger questions such as the relationship between writer and society, or issues of privacy, appropriation, or homelessness. While none of these questions can be definitively answered, they can be fruitfully discussed. Originating as questions posed in creative-writing seminars, these essays have grown into companion texts for both writers and readers who want to participate in a conversation about what writers do.

Joining the Dialogue offers an exciting new approach for teaching academic research writing to introductory students by drawing on communication ethics. Holding to the current view that academic writing means situating ourselves in a research community and learning how to join the research conversations going on around us, Joining the Dialogue proposes that how we engage in dialogue with other researchers in our community matters. We not only read, acknowledge, and build on the research of others as we compose our work; we also engage openly, attentively, critically, and responsively to their ideas as we articulate our own. With this in mind, Joining the Dialogue is geared to helping students discover the key ethical practices of dialogue—receptivity and response-ability—as they join a research conversation. It also helps students master the dialogic structure of research essays as they write in and for their academic communities. Combining an ethical approach with accessible prose, dialogic structures and templates, practical exercises, and ample illustrations from across the disciplines, Joining the Dialogue teaches students not only how to write research essays but also how to write those essays ethically as a dialogue with other researchers and readers.

Write Moves is an invitation for the student to understand and experience creative writing in the larger frame of humanities education. The practical instruction offered comes in the form of "moves" or tactics for the apprentice writer to try. But the title also speaks to a core value of this project: that creative writing exists to move us. The book focuses on concise, human-voiced instruction in poetry, the short story, and the short creative nonfiction essay. Emphasis on short forms allows the beginning student to appreciate lessons in craft without being overwhelmed by lengthy model texts; diverse examples of these genres are offered in the anthology.

First Published in 1995. Routledge is an imprint of Taylor & Francis, an informa company.

Do we map as we read? How central to our experience of literature is the way in which we spatialise and visualise a fictional world? Reading and Mapping Fiction offers a fresh approach to the interpretation of literary space and place centred upon the emergence of a fictional map alongside the text in the late nineteenth and early twentieth centuries. Bringing together a range of new and emerging theories, including cognitive mapping and critical cartography, Bushell compellingly argues that this activity, whatever it is called - mapping, diagramming, visualising, spatialising - is a vital and intrinsic part of how we experience literature, and of what makes it so powerful. Drawing on both the theory and history of literature and cartography, this richly illustrated study opens up understanding of spatial meaning and interpretation in new ways that are relevant to both more traditional academic scholarship and to newly emerging digital practices.

Explaining Research is the most comprehensive guide for communicating in the sciences. In this new edition, leading research communicator Dennis Meredith provides readers with the practical tools and techniques scientists need to reach their audiences effectively.
