In its 114th year, Billboard remains the world's premier weekly music publication and a diverse digital, events, brand, content and data licensing platform. Billboard publishes the most trusted charts and offers unrivaled reporting about the latest music, video, gaming, media, digital and mobile entertainment issues and trends.

The most trustworthy source of information available today on savings and investments, taxes, money management, home ownership and many other personal finance topics.

This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of "autonomous driving".

The Best of News Design 31st Edition, the latest edition in Rockportâ€™s highly respected series, presents the winning entries from the Society for News Designâ€™s 2010 competition. Featuring work selected by a panel of judges from more than 14,000 international publication entries, this inspirational volume sets the bar for excellence in journalistic design. Bold, full-color layouts feature the best-of-the-best in news, features, portfolios, visuals, and more, and each entry is accompanied by insightful commentary on the elements that made the piece a standout winner. Every industry professional aspires to one day see his or her work in this book.
