Physics of MRI: a primer

The history of magnetic resonance imaging includes the work of many researchers who contributed to the discovery of nuclear magnetic resonance and described the underlying physics of magnetic resonance imaging, starting early in the twentieth century. MR imaging was invented by Paul C. Lauterbur who developed a mechanism to encode spatial information into an NMR signal using magnetic field gradients in September 1971; he published the theory behind it in March 1973. The factors leading to image
