For the last three centuries forests have been recognised as providing the best water catchments and valued for their sustained output of high quality water. In Australia, work which was commenced fifty years ago has come to fruition and is providing new information on forest hydrology issues. The book focusses on the issues of small streams, including catchment definition, slope, hydrograph formation, water quality measurement, and annual water yield. The world-wide management issues of sustaining riparian forests are examined, using the River Murray forests as an example. Finally a large amount of information is drawn together to examine the management of forested catchments for water supplies. This book presents an incisive, disciplined, quantitative approach to dealing with forest hydrology matters. Although world-wide in application, the book particularly draws on Australian studies. It is written with the needs of students and forest practitioners in mind.

Our suppositions about human nature colour everything from the way we bargain with a used-car dealer to our expectations about further conflict in the Middle East. Our assumptions about human nature underlie our reactions to specific events. Wrightsman designed this second edition of his book to enhance our understanding of many significant issues about human nature, including the relationship of attitudes to behaviour, the unidimensionality of attitudes and the influence of social movements on beliefs.

The Brief Edition of A PEOPLE AND A NATION offers a succinct and spirited narrative that tells the stories of all people in the United States. The authors' attention to race and racial identity, and their inclusion of everyday people and popular culture brings history to life, engaging readers and encouraging them to imagine what life was really like in the past. In the tenth edition, the number of chapters has been reduced from 33 to 29, making the text easier to assign in a typical semester.
