The Human Voice review: Tilda Swinton is 'glorious' in ...

The human voice consists of sound made by a human being using the vocal tract, such as talking, singing, laughing, crying, screaming, shouting, yelling etc. The human voice frequency is specifically a part of human sound production in which the vocal folds are the primary sound source. Generally speaking, the mechanism for generating the human voice can be subdivided into three parts; the lungs, the vocal folds within the larynx, and the articulators. The lungs, the "pump" must produce adequate

Human voice - Wikipedia

When applied to speech, the human voice spans a range from about 125Hz to 8kHz. It's no coincidence that this range puts the voice in the center of the range of human hearing - early humans who were more attuned to this frequency range were more able to understand others and more likely to survive and thrive.
